## PEARL SOFTWARE RELEASES BETA VERSION OF PEARL ECHO

---

Pearl Software has unveiled Pearl Echo Version 11 with support for the Microsoft Windows 8 operating system.

**Exton, PA – June 26, 2013** - Pearl Software continues to enhance its highly acclaimed Employee Internet monitoring and filtering products with new features and support for Microsoft's latest technologies. In addition to full support for Windows 8, this latest offering from Pearl includes Echo Noise Reduction™ for more targeted usage reporting, added data security, stricter blocking capabilities and enhancements in administrative usability.

"The majority of new features are the direct result of customer feedback," said Pearl Software CTO, Joe Field. "Many of our customers are multi-year clients, some extending back over ten years. Through direct interaction we continue to learn what our customers want and expect to see in our products. They are excited and our relationship with them is strengthened when customers see their suggestions come to life." Pearl Software's products continue to satisfy enterprise endpoint security needs even as Microsoft announces the end of life of ISA and many of its Forefront security offerings.

In peer-to-peer, server-centric and client-server computing environments, Pearl Echo filters and monitors a variety of Internet activities including e-mail, IM, chat, news, the transferring of files and Web browsing. The software's patented mobility technology is an ideal tool for organizations that want their policies for Internet use to cover not only their internal network but also to extend beyond it.

### About Pearl Software

Pearl Software of Exton, Pa., was founded in 1996 and is a leader in the development of Internet monitoring and web filtering software that is used by companies, government agencies, schools, hospitals and other public and private entities around the world. Its products are designed to provide network administrators with tools to monitor employee Internet usage and protect their networks from internal and external threats.
